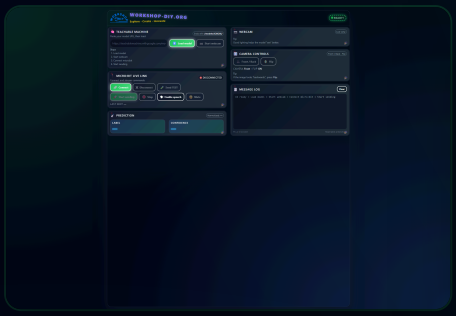
TEACHABLE-MACHINE

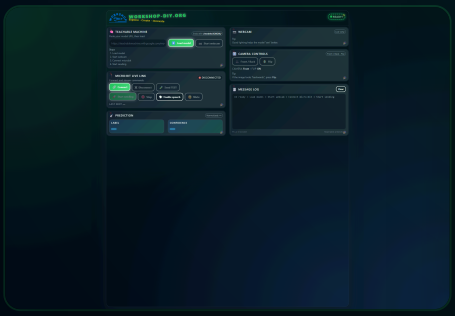
micro:bit V2

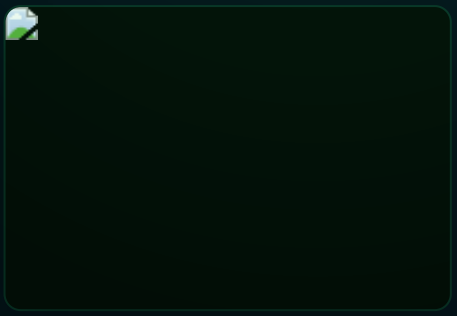
Teach a model. Drive a micro:bit.

The browser IS the ML classifier.

Paste any Teachable Machine image-model URL. Classify in the browser. Light the 5×5.







Get started in 60 seconds

1. Train a model on teachablemachine.withgoogle.com.
2. Copy the sharable URL.
3. Open Chrome or Edge — paste the URL.
4. Show a gesture — the label + confidence fire.
5. Pair a micro:bit V2 — watch the LEDs.

Any TM image model

Paste a Teachable Machine URL — the model loads, TensorFlow.js runs inference locally on your webcam.

9 label → LED mappings

Map each class to an icon: heart, arrow, smile, tick, cross, note, house, yes, no. Swap at will.

CMD:LABEL,CONFIDENCE

Open Nordic UART protocol over BLE. Works with any MakeCode firmware — fork the .hex, change the LEDs.
