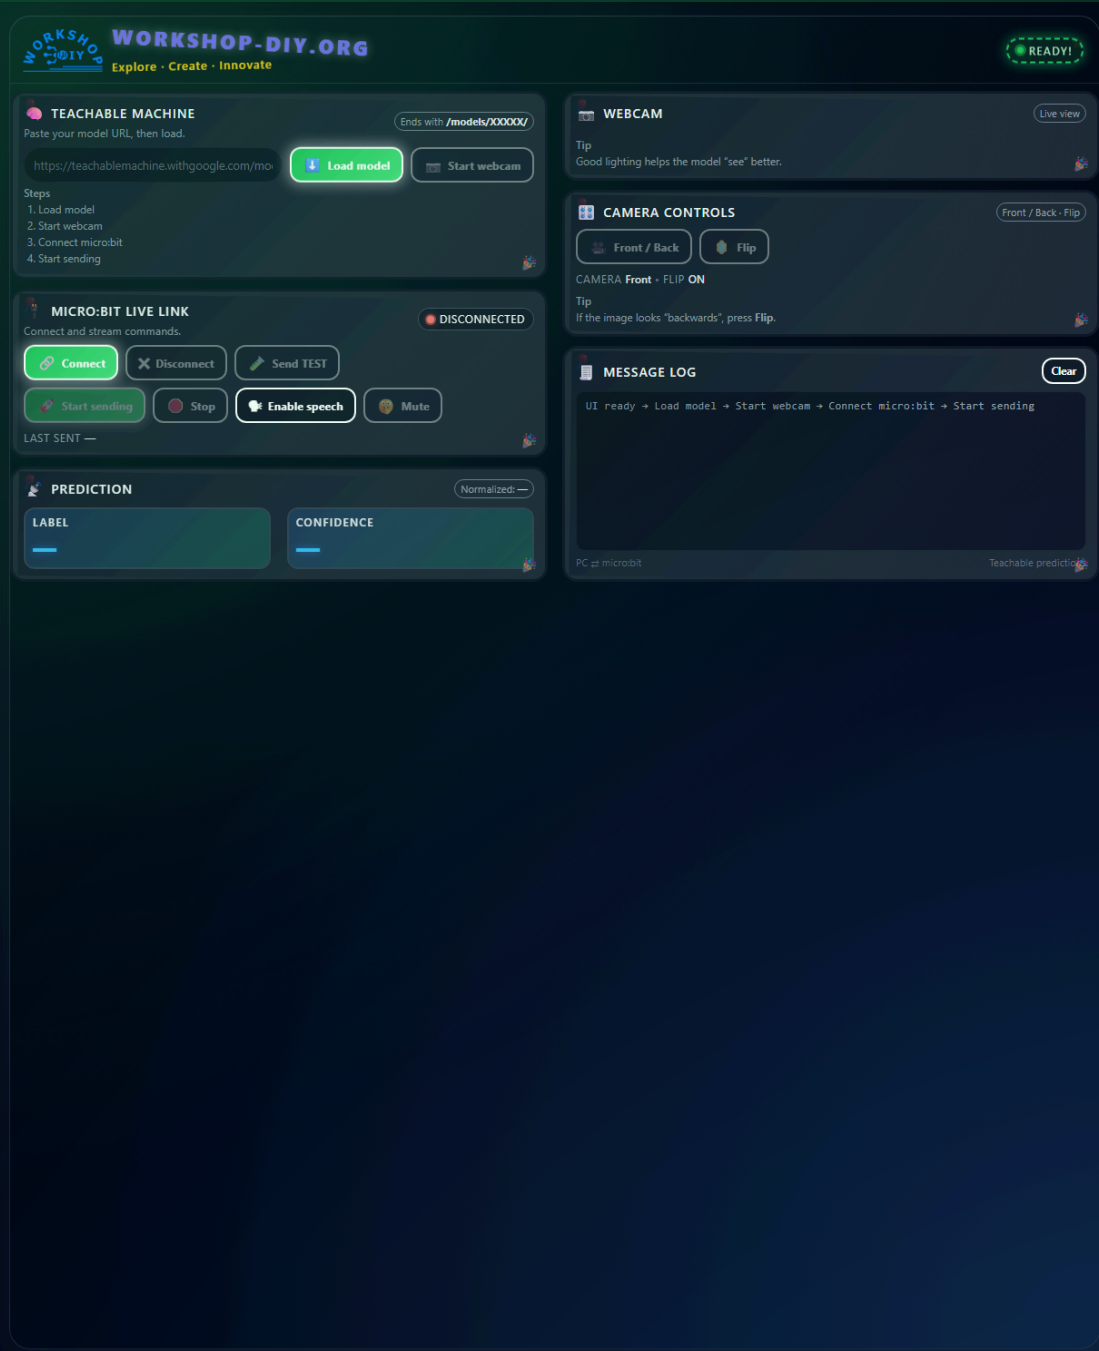
GOOGLE TEACHABLE MACHINE · LOCAL TF.JS · BLE UART

Teach a model. Drive a micro:bit.

Paste any Teachable Machine image-model URL. Classify in the browser. Light the 5×5.



Any TM image model

Paste a Teachable Machine URL — the model loads, TensorFlow.js runs inference locally on your webcam.

9 label → LED mappings

Map each class to an icon: heart, arrow, smile, tick, cross, note, house, yes, no. Swap at will.

CMD:LABEL,CONFIDENCE

Open Nordic UART protocol over BLE. Works with any MakeCode firmware — fork the .hex, change the LEDs.

Chrome / Edge · No cloud after training · 100% local inference
TensorFlow.js · MakeCode firmware · Open source friendly
